

LIST OF CURRENT CLAIMS

1. (Currently Amended) A ~~handle-for-bottle~~ bottle with a flexible handle comprising:

a ribbon made of flexible material and positioned on one side surface of a bottle vertically, ~~[[the]]~~ a central portion of the ribbon being fixed to ~~[[the]]~~ a central part of the bottle by a film bearing a trademark, which wraps around the central part of the bottle and overlies said ribbon; and a pair of coupling members adhered on both end portions of the ribbon, ~~wherein~~ whereby the both end portions of the ribbon ~~[[are]]~~ may be bended in upward and downward directions respectively and the coupling members ~~[[are]]~~ coupled with each to form a ribbon type handle when the bottle is used.

2. (Currently Amended) The ~~handle-for bottle~~ with a flexible handle according to claim 1, wherein the ribbon is made of leather or synthetic resin material.

3. (Currently Amended) The ~~handle-for bottle~~ with a flexible handle according to claim 1, wherein the coupling members are a female button and a male button.

4. (Currently Amended) The ~~handle-for bottle~~ with a flexible handle according to claim 1, wherein the coupling members are a pair of ~~Velcro~~ hook and loop type fastening tapes.

5. (New) The bottle with a flexible handle according to claim 1, wherein end portions of said ribbons are weakly adhered to said bottle.

6. (New) The bottle with a flexible handle according to claim 1, wherein a restoring force of said ribbon holds the end portions of the ribbon near the surface of said bottle.

7. (New) A bottle with a flexible handle, comprising:

a bottle;

a ribbon disposed vertically along one side surface of said bottle;

a film wrapped about a central part of said bottle and overlying said ribbon whereby said ribbon is secured to said bottle by said film;

a pair of coupling members adhered respectively to opposite end portions of said ribbon, whereby said opposite end portions of said ribbon may be bended upward and downward respectively to be coupled with each other so that said ribbon forms a handle.

8. (New) The bottle with a flexible handle according to claim 7, wherein end portions of said ribbons adhered to said bottle by a low-viscosity adhesive.

9. (New) The bottle with a flexible handle according to claim 7, wherein a restoring force of said ribbon holds the end portions of the ribbon near the surface of said bottle.

10. (New) The bottle with a flexible handle according to claim 7, wherein the ribbon is made of leather or synthetic resin material.
